

Not all infections can be prevented with a shower

Virtually all cervical cancer cases (99%) are linked to genital infections caused by human papillomavirus (HPV). These can be prevented through HPV Vaccinations and regular cervical cancer screening (Pap/HPV Tests). Every year, more than 311,000* women die from cervical cancer worldwide.

Don't let cervical cancer get a hold on your life. Contact the Singapore Cancer Society to book your free HPV Vaccination or Cervical Cancer Screening (Pap/HPV Test) at no cost.
