

Ladies, have you had your Human Papillomavirus (HPV) vaccine?

You can get your HPV vaccination at no cost* at participating Community Health Assistant Scheme (CHAS) General Practitioner (GP) clinics if you are eligible.

**With Temasek Foundation covering out-of-pocket expenses after government subsidies. Valid until 30 June 2026.*

Frequently Asked Questions

What is HPV?

Human papillomavirus (HPV) is a group of common viruses that causes infections in both men and women. Most HPV infections clear up on their own and do not cause any problem. However, sometimes the infections do not go away. Persistent infections by certain HPV types can cause several cancers including cervical cancer. Unfortunately, HPV infection has no treatment or cure but the best way to help prevent this is to get vaccinated.

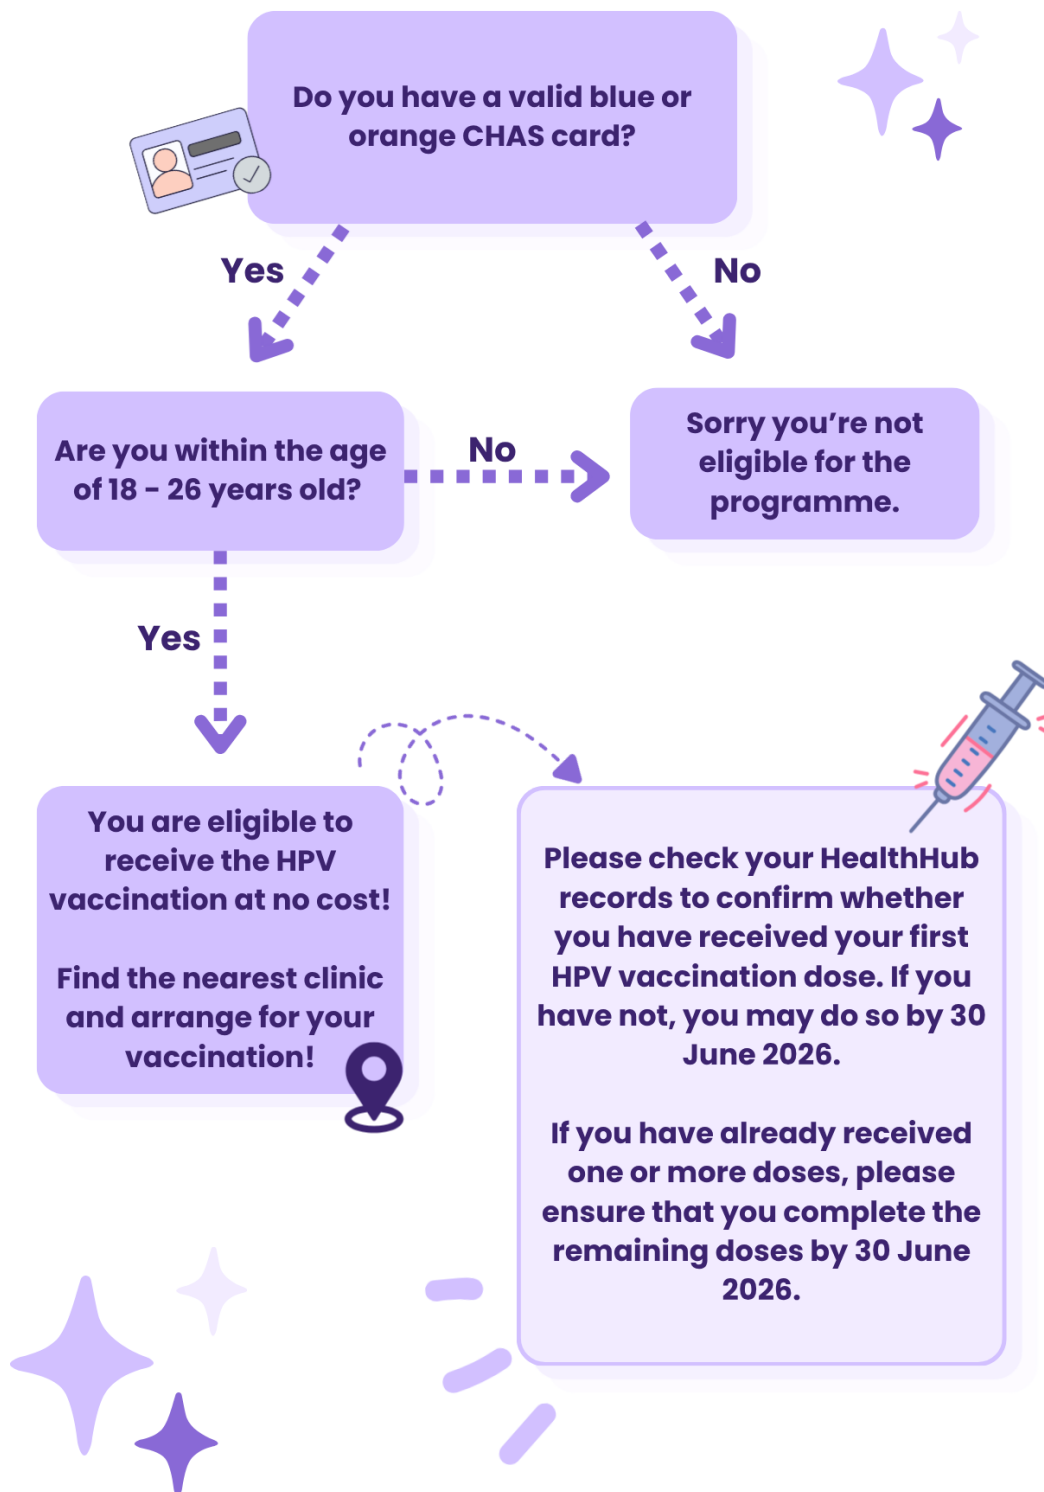

How to book a HPV appointment?

After a successful eligibility check, you may call the nearest participating clinic directly to make an appointment.

Click on your following district area (North, South, East, West, Central) to view the list of participating General Practitioner (GP) clinics:

| | |
|----------------------------|---|
| East | First two digits of postal code 42 to 52, 81 |
| West | First two digits of postal code 11 to 13 and 60 to 68 |
| Central | First two digits of postal code 1 to 10, 14 to 41, 58, 59, 77, 78 |
| North | First two digits of postal code 69 to 73, 75 and 76 |
| North-East | First two digits of postal code 53 to 57, 79, 80 and 82 |

Eligibility Check

Step 1: Ensure that you have a valid blue or orange CHAS card.

Step 2: Ensure that you are between 18 and 26 years old at the time of the eligibility check.

Step 3: Please check your HealthHub records to confirm whether you have received your first HPV vaccination dose. If you have not, you may do so by 30 June 2026.

If you have already received one or more doses, please ensure that you complete the remaining doses by 30 June 2026.

As this programme is reaching its natural conclusion, any costs arising from vaccinations administered from 1 July 2026 onwards may be claimable via Medisave.

Step 4: Once you have confirmed your eligibility, find the nearest clinic and arrange for your vaccination!

Why get vaccinated?

HPV vaccines can prevent infections caused by certain types of Human Papillomavirus (HPV), including types that are linked to HPV-related cancers. The vaccine is recommended for use in young women. For it to be most effective, the vaccine should be given before the first sexual activity where HPV exposure may occur.

The HPV vaccine prevents several cancers, including:

- Cervical cancer in females
- Vaginal and vulva cancers in females
- Anal cancer in females and males
- Throat cancers in females and males
- Penile cancer in males

How many HPV doses should I take?

The HPV vaccination consists of three doses.

[Do I need to pay anything for the vaccine?](#)

If you are eligible, you can get your HPV vaccination done at No COST at the participating GP clinics.

[Are there any HPV vaccine side effects?](#)

The common side effects are

- Soreness at the site of injection
- Fever
- Headache

Please discuss with your doctor if you have concerns about side effects.

[What's next after HPV vaccination?](#)

Regular screening (Pap/HPV test) is encouraged as there are no signs or symptoms during the early stages of cervical cancer. It is important for women aged 25 to 69 years old to go for regular cervical cancer screening especially if one is sexually active as the HPV vaccination does not protect against all cancer-causing HPV subtypes.

Cervical cancer screening is the most effective way to assess one's risk of developing cervical cancer. The high-risk (virus) strains will take time after exposure to develop into pre-cancerous or cancerous lesions. Hence, detecting these high-risk strains early can ensure that you can treat them early and prevent them from becoming cervical cancer.

Early Detection Saves Lives
